

# Data Products for Analysts

# Lesson objectives

## Data Products for Analysts

1. Define data products and describe their usefulness.
1. Provide examples of data products
2. Find and use curated data products in Starburst Enterprise.

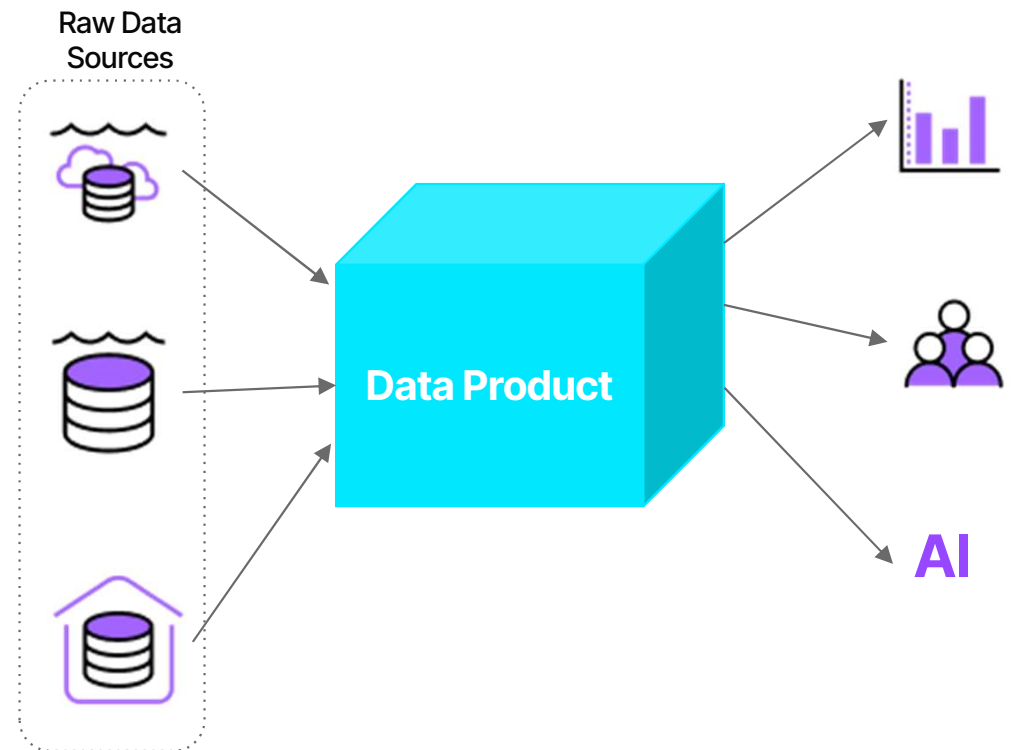

# What is a Data Product?

## Definition:

A data product is a curated, reusable dataset designed for a specific business purpose.

## Key traits:

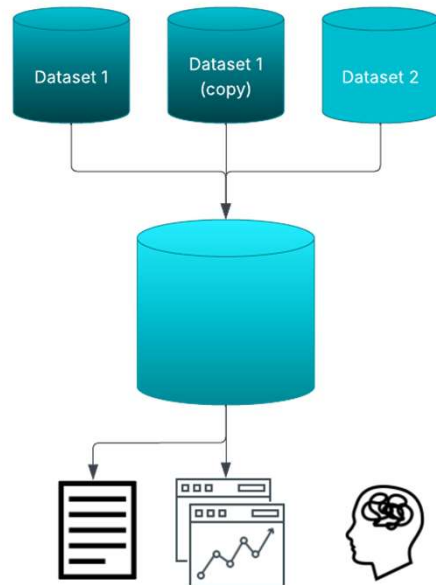

- Reliable
- Well-documented
- Governed
- Easy to discover and use

# Why Are Data Products Important?

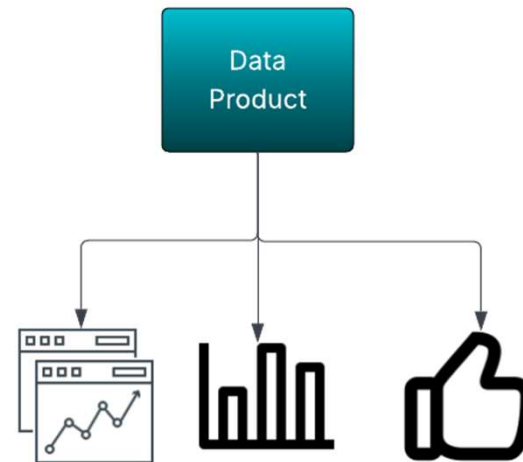

## Problem without them:

- Analysts spend too much time cleaning data.
- Multiple teams recreate the same dataset differently.
- Trust in reports is low.

## Solution with data products:

- Standardized, trusted datasets
- Faster access to insights
- Consistency across the org

# How Data Products Benefit Data Analysts

- ★ **Save time** (less wrangling, more analyzing)
- ★ **Increase confidence in results** (trusted definitions)
- ★ **Self-service discovery** (find and use the right dataset quickly)
- ★ **Enable advanced analytics & AI** (cleaner, structured inputs)

# Instructor demonstration

Exploring a customer 360 data  
product (15 minutes)

# Hands-on exercise

Compare results from raw  
tables vs. curated data product  
(20 minutes)

# Lesson summary

## Data Products for Analysts

1. A data product is a curated, reusable dataset designed for a specific purpose.
2. Data products ensure faster access to insights and consistency across the organization.
3. Data products save time and increase confidence for data analysts.
